

15 Things You Should Know About Eyelash Extension Glue

Are you really know well about the eyelash extension glue, have you ever met some unknown questions about the glue?

In this article, I almost gather all the questions you may meet during the eyelash extension grafting work and some information you want to know about the eyelash extension glue.

So come on with me!

1. Is eyelash extension glue safe when pregnant?

Yes. it is safe for the ladies who are pregnant.

Pregnant is a sensitive period for a mum, no matter the food, drinks, clothes or cosmetics, everything is in special request. Our mums nowadays are willing to keep beauty and want to do the eyelash extension during this special period, it is safe for the eyelash extension lifting with a high-technical artist, qualified lashes and glue,

we recommend [Lankiz](#) sensitive-use glue for the ladies who are pregnant.

As the sensitive-use glue has a low fume and can minimize any discomfort. How long does eyelash extension glue last?

2. Can eyelash extension glue damage your eyes?

About this question, someone also asked: “Is eyelash extension glue bad for eyes?” “Can eyelash extension glue cause blindness?”

Generally speaking, this situation won't happen, the technician has been trained and they will do the work with the right eyelash extensions and glue according to the standard method and process.

Besides, during the grafting, your eyes are closed, the glue is used to the native lashes for 2mm away from the root and won't touch the eyelids. So please do as the technician's instruction and enjoy the beautiful process.

3. Are all eyelash extension glue the same?

No. Eyelash extension glue is mainly divided into two categories:

“low-stimulation type” that reduces stimulation and “quick-dry type” that emphasizes hardening speed.

In actual application, according to the clients’ needs, Lankiz made three types of eyelash extension glues:

Extra-strong glue with quick dry time and long retention time, which is suitable for the professional technician.

Practice-use glue with slower dry time and short retention time, it is usually for the new beginners who are not familiar with the eyelash extension lifting work.

Sensitive-use glue with low fume can be little stimulated for the clients who are sensitive.

4. What is eyelash extension glue made of or does eyelash extension glue contain formaldehyde?

Of course, the glue can’t contain formaldehyde that is harmful to human.

The main component of the eyelash extension glue is cyanoacrylate.

They are made of:

Adhesive component— Cyanoacrylate (usually 80%)

Reinforced viscosity component— PMMA, etc. (micro configuration to adjust viscosity and air drying speed)

Coloring component— Carbon black (micro configuration for coloring, highlighting effect)

The Lankiz eyelash extension glue is free of formaldehyde.

5. Does eyelash extension glue contain latex?

Latex is a stable dispersion (emulsion) of polymer microparticles in an aqueous medium. It is found in nature, but synthetic latexes can be made by polymerizing a monomer such as styrene that has been emulsified with surfactants. (Quote from Wikipedia)

Lankiz eyelash extension glue is free of latex.

6. Why does eyelash extension glue turn white?

The glue turns white especially after the lifting work, actually, this is a chemical reaction.

Cyanoacrylate(glue component) reacts with trace moisture in the air or on the surface of the appendage to instantaneously harden.

In general, in the container, relative to the total amount of liquid, contact with the air surface area is small, not harden. Once applied to the material, the surface area increases, hardening reaction is active, chain reaction, overall hardening.

Chemically, this hardening mechanism is called polymerization.

When cyanoacrylate is hardened, the bonding part and its surrounding parts will turn white, which is called “bleaching phenomenon”.so the eyelash extension glue looks turn white.

So to avoid the glue turn white, the technician should clean up the water no matter it is the sweat or the tears from the clients.

7. Does eyelash extension glue expire?

Yes. Eyelash extension glue has an expire of 3-5 months. The general principle is stored in 3 months before open up. If it is already opened, it is better to use up in 2 months. Otherwise, the glue will become viscous, the silk will be dragged when the eyelash extension is stuck, and the hardening speed will be slow.

8. Does sensitive eyelash extension glue work?

Yes. Sensitive eyelash extension glue works, because its ingredient is low fume and irritation, so the bond force and dry time are weaker than the extra strong glue.

It requests the technician more patience and cares to complete a perfect work for the sensitive clients.

9. Which eyelash extension glue is the best?

This question can be read in two aspects:

One is from the clients, which glue is the best for them, of course, the

most suitable is the best, for the sensitive clients, the low fume glue is the best, and for the clients who are not sensitive the extra-strong is the best.

The other aspect is from the technician, it is considered from the type and quality, also the effect, for the professionals, the extra-strong is the best, as it is fast dry and have long retention time, but for the beginners, the practice-use is the best, the slow dry time can give the artists time to adjust the lashes direction and curl.

About the quality, Lankiz eyelash extension glue has been certified and can guarantee the quality.

10. Where are eyelash extensions glued?

The eyelash extension glue is used on the individual lashes and keep a distance of about 2 mm from the root of the native lashes. As the glue is chemical, keep a distance can keep the clients safe.

11. Where to buy eyelash extension glue?

The eyelash extension glue can be bought from the online store or

offline store.

Lankizlashes has an online store and offers global shipping service for all the clients who have a need in eyelash extension glue.

12. Where and how to store eyelash extension glue?

The glue should be kept in the cool and avoid direct sunlight.

It is ideal when the room temperature is maintained at 25-28°C, the indoor humidity is about 55%.

When the temperature and humidity are high in summer and low in winter, pay special attention to maintain room temperature.

Since the temperature and humidity are high or low will affect the glue's effect, causing the glue to harden or weaken, so should pay attention to the storage place.

Of course, the glue cannot be stored in a refrigerator or freezer for home use. If there is no cosmetic refrigerator, it is best to purchase it regularly, without the need for spare glue.

The eyelash extension glue is typically placed in an aluminum pouch with a desiccant for sale. In order to prevent the aging of the glue caused by moisture, it is necessary to wipe the glue and dirt attached to the nozzle and the cap, tighten the cap, seal the aluminum bag, and store it in a cool place (the dark place of 18-23°C).

For more information about the storage, please read *The Ultimate Guides for Eyelash Extension Glue*(2019) for more.

13.What dissolves eyelash extension glue?

The question can also be asked about “how to remove eyelash extension glue?” ”how to get eyelash extension glue off skin?” ”how to soften eyelash extension glue?”

The remover can be used to dissolve the eyelash extension glue.

Below is the usage:

Before applying this product, please use the cleaning solution to

remove the residual makeup/dirt around the eyelashes or eyes.

Remove excess moisture from the adhesive with nonwoven gauze to apply directly to the adhesive.

Remove the container from the package.

Maintain the vertical Angle and unscrew the cap.

Put it on a clean surface so that it falls to the floor.

With the container facing down, squeeze the container with your fingers and squeeze the appropriate amount of remover onto the pad/paper/clean cotton swab or nonwoven gauze.

Apply an appropriate amount of remover to the adhesive.

After painting, wait for it to soak fully.

After soaking thoroughly, gently remove the eyelash extensions and glue with a small brush or cotton swab.

During the grafting, glued eyelash extensions fell on the skin, you can take a trace of the remover for cleaning. In this case, use a small brush or cotton swab dipped the remover and gently wipe, then use cotton and essence water cleaning.

14.How long does eyelash extension glue last?

The retention time is different according to the type of glues, for example, Lankiz extra-strong and sensitive-use glue has a retention

time of 8 weeks, practice-use glue has a retention time of 5 weeks.

Considering the lashes' life cycle, the glue retention time can meet the needs of the eyelash extension work.
